

DATA ANALYSIS

Manshikha
Thakur

INTRODUCTION AND OBJECTIVES

Objective:

- To identify Country which have potential and is good to open a new restaurant.

Analysis of rates, cuisines, country ,city , rating, cost to grow up the restaurant which is to open

Introduction:

- In a dynamic market, strategic expansion is crucial for sustained growth. This analysis delves into comprehensive data to pinpoint optimal locations, understand market trends, and provide actionable insights for informed decision-making.

Key Components:

- Objective assessment of countries and cities for new restaurant openings.
- In-depth analysis of factors impacting restaurant success.
- Recommendations rooted in data-driven insights

DATA OVERVIEW

After navigating through the dataset we have got the table name 'Cleaned data' have 26 column attributes. each facet holds a unique key to unraveling insights into the culinary world. From the nuanced nuances of restaurant names and locations to the palpable metrics of ratings, cost, and customer engagement, our data weaves a narrative waiting to be deciphered.

Regarding Headings:

- Restaurant Identity: Unique Restaurant ID and Name emplace the identification of Restaurant.
- Geographical insight: Unique Country code, Country name, position on map by attitude and altitude.
- Culinary diversity: An array of cuisiness which will help to attract the customer.
- Service provide by restaurant : The restaurant weather takes table reservations and accepts orders online.
- Cost consideration: Contains cost of items, ratings of them and average price.
- Demand in globally and domestically: Food demand and cost of items all over world.
- Service till now: Give a well identification of restaurant that how it withstand on believes of people till present date.

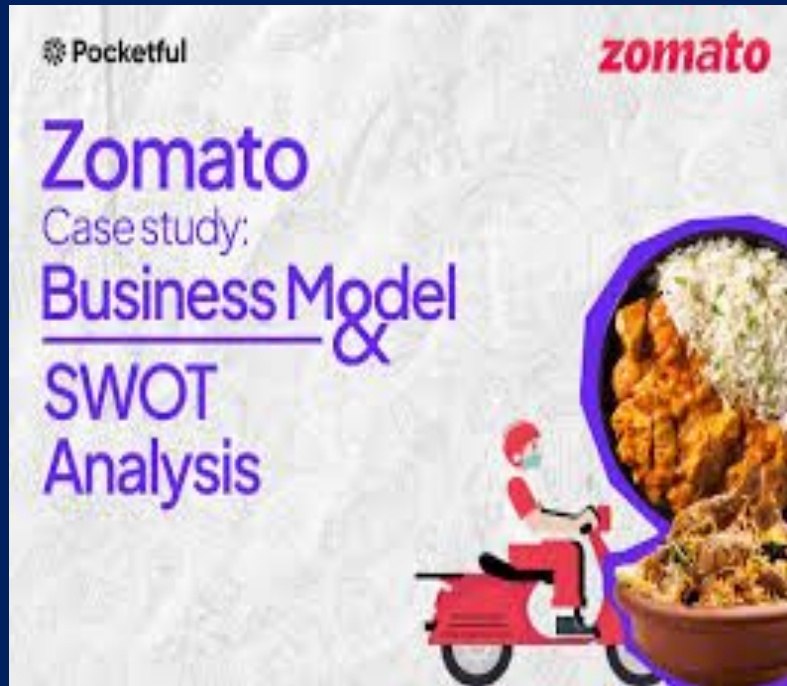

Methodology

- Data Cleansing: Thorough cleanup, from city names to format consistency.
- Enrichment Strategies: Infusing country descriptions and expanding our dataset.
- Analytical Framework: Excel's pivot tables, IF functions, and statistical tools.

Toolbox Overview

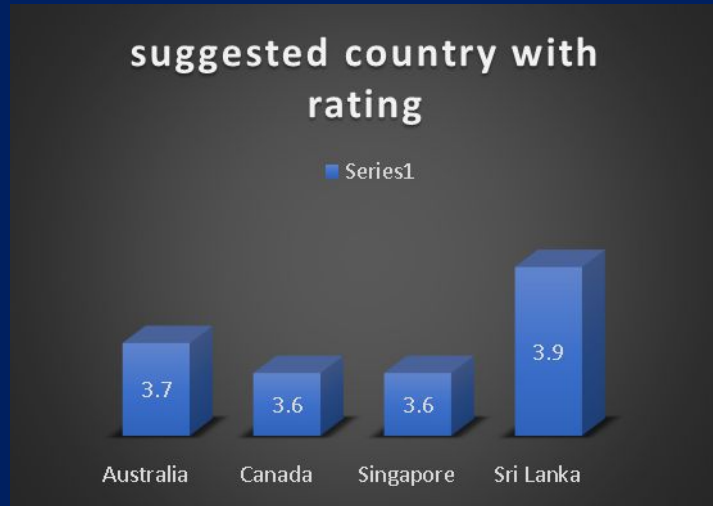

- Statistical Analysis: Uncovering trends and patterns.
- Excel Functions: Pivot tables, LOOKUP, logical operators.
- Balanced Precision: Technical insights in accessible language.
- Statistical Analysis: Uncovering trends and patterns.
- Excel Functions: Pivot tables, LOOKUP, logical operators.
- Balanced Precision: Technical insights in accessible language.

ANALYSIS OF OBJECTIVE QUESTION

- Data Overview: Explore tables, attributes, and data cleaning steps.
- Geographical Insights: Examine restaurant distribution across countries and yearly openings.
- Pricing Patterns: Analyze pricing trends and restaurant counts based on price range.
- Popularity Metrics: Investigate voter counts and average ratings for key insights.
- Conditional Analysis: Explore specific conditions and their impact on restaurant metrics.
- Customized Pricing: Understand variations in average cost through customized pricing.
- Array Formula Application: Discuss the use of array formulas for complex calculations.

SUGGESTED COUNTRY

ANALYTICAL APPROACH:

- Used a pivot table by integrating Country name, Restaurant count and rating in an average
- Analyze the rating below 4 and least restaurant count I found 4 country.
- Applied filter on the 4 country and made a chart shown in right.

Strategical Insight:

- Country and city where the potential of growth is higher for newer restaurant
- Using average rating and lower restaurant count a rough analysis done and found a suitable low competition area where chances is higher for increase the rating
- Using pivot table I got to know that from 7 countries there are 25 restaurant, and in that considering rating below 4, and found four Countries that are suitable for opening a new restaurant.

Recommended Countries with the cities

Analytical Approach:

Utilized a pivot table by taking country , City, as row and restaurant ID as count and rating in average. Taking filter in country and selected 4 country and used conditional formatting in rating bellow 4.

Strategical Insight:

Highlighted cities are preferable for entry level restaurant. Cities are in tabular with Country so the preferred country are also analysed.

CANADA

Chatem-Kent, Consort,
Yorkton

Sri Lanka

Colombo

Singapore

Singapore

Australia

Armidale, Balingup, Dicky
beach, Flaxton, Forest,
Hepburn springs,
Inverloch, Lakes Entrance,
Lorn, Macedon , Meyfield,
Middleton beach,
Montville, Peynesville,
Panola, Philip Island,
Victor Harbor

ANALYZING FOOD EXPENDITURE IN TARGET REGIONS

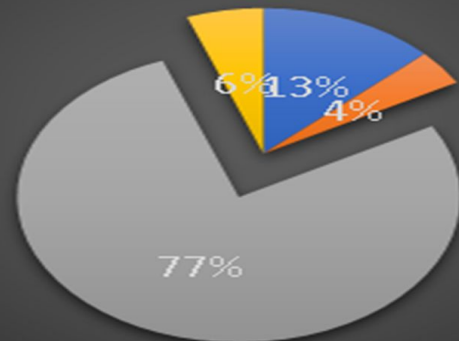

Analytical Approach:

Expenditure of food in selected country is populated as shown is calculated on the basis of INR conversion rate with summing all the restaurant available in the respected cities with 'average cost of two'.

Strategical Insight:

Visualisation chart in 'pie' and a tabular table shows the expenditure in the targeted country. Clearly visualised Singapore contributes high expenditure among the 3 country.

**Total Expenditure
on Food**

■ Australia ■ Canada
■ Singapore ■ Sri Lanka

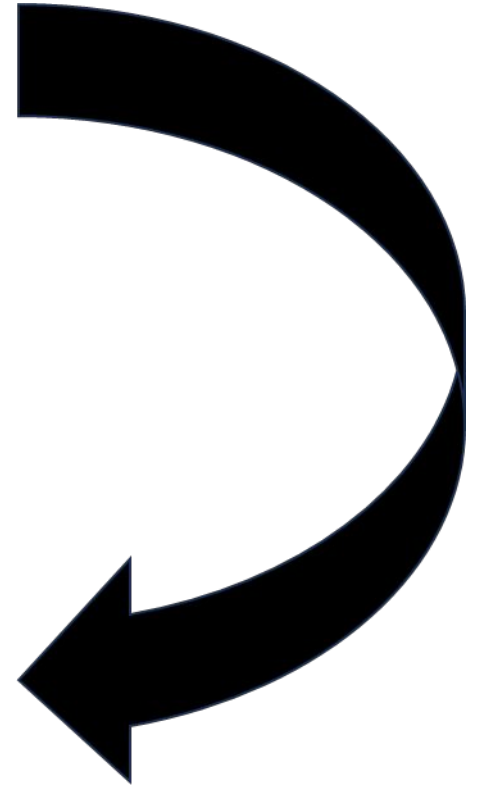

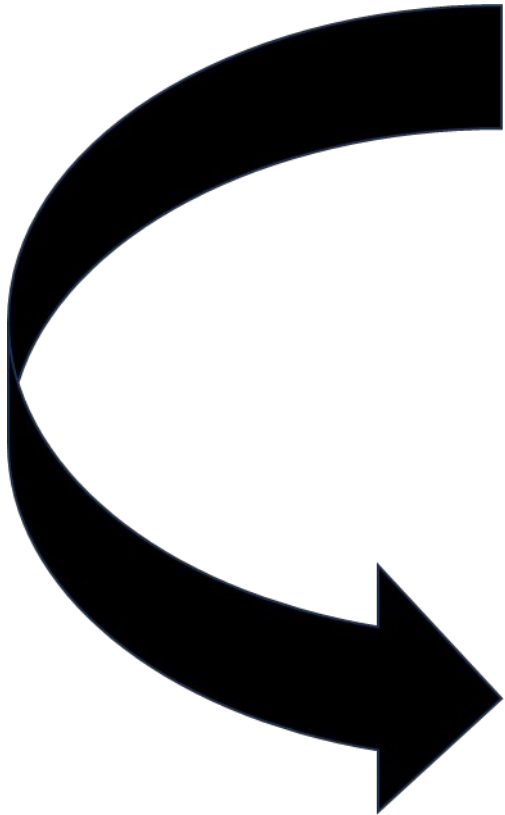

COMPETITOR ANALYSIS

FEW RESTAURANT NAMES - BIGGEST COMPETITORS

- Bridge Road Brewers
- 1918 Bistro & Grill
- Lake House
- AL' Frank Cookies
- Ministry of Crab
- The Sizzle

RESTAURANTS WITH LOW RATING

- Star Buffet
- Pier 70
- Makansutra
- Elite Indian Restaurant
- Queen's Cafe

CUISINES ANALYSIS

CUISINES WITH TOP RATINGS

CUISINES

- Pizza
- Mediterranean
- Australian
- Italian
- Chinese
- Bakery
- Seafood
- American
- Continental
- Desserts
- Beverages

Culinary choices wield significant influence on ratings, as evidenced by a two-step analysis. The first pivot table dissects country-specific restaurant ratings, guiding adaptation to local preferences. Simultaneously, the second pivot table provides a broader global perspective, underlining the pivotal role of culinary choices in shaping customer satisfaction.
